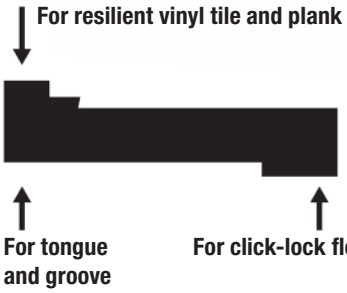
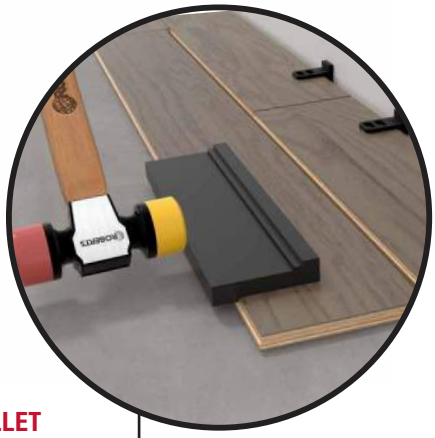
Gently pushes the tongue and groove or edges of resilient vinyl tile, laminate or hardwood flooring planks together

UNIQUE DESIGN
for use with most types of flooring





USE WITH A SOFT-HEAD MALLET
Do not use with metal hammers

Scan here for PRODUCT INFORMATION

The ROBERTS® Universal Tapping Block is designed to push planks together without damaging the flooring. Two sided, and with edges designed for tongue and groove and click-lock floors, the unique design of this tapping block works with most types of flooring including resilient vinyl tile, laminate and hardwood planks. It is easy to use by lightly tapping the boards together to create a tight seam. The 9.25" width provides plenty of space to tap with a soft-head mallet only, not with a metal hammer, to protect your flooring tongue or edge from damage during installation, contributing to professional results.
