ROBERTS® Patent Pending Dual Expansion Joint Spacer is the only spacer you'll need for your floating and glue down vinyl, laminate and hardwood flooring jobs. Not only do they space out ¼" and ½" expansion gaps, these spacers also form 1" thresholds. Expansion joints and thresholds leave a perimeter around your plank floors for expanding and contracting without buckling, increasing the longevity of your installation. This all-in one-spacer won't tip over during installation, and makes custom flooring jobs easy.
